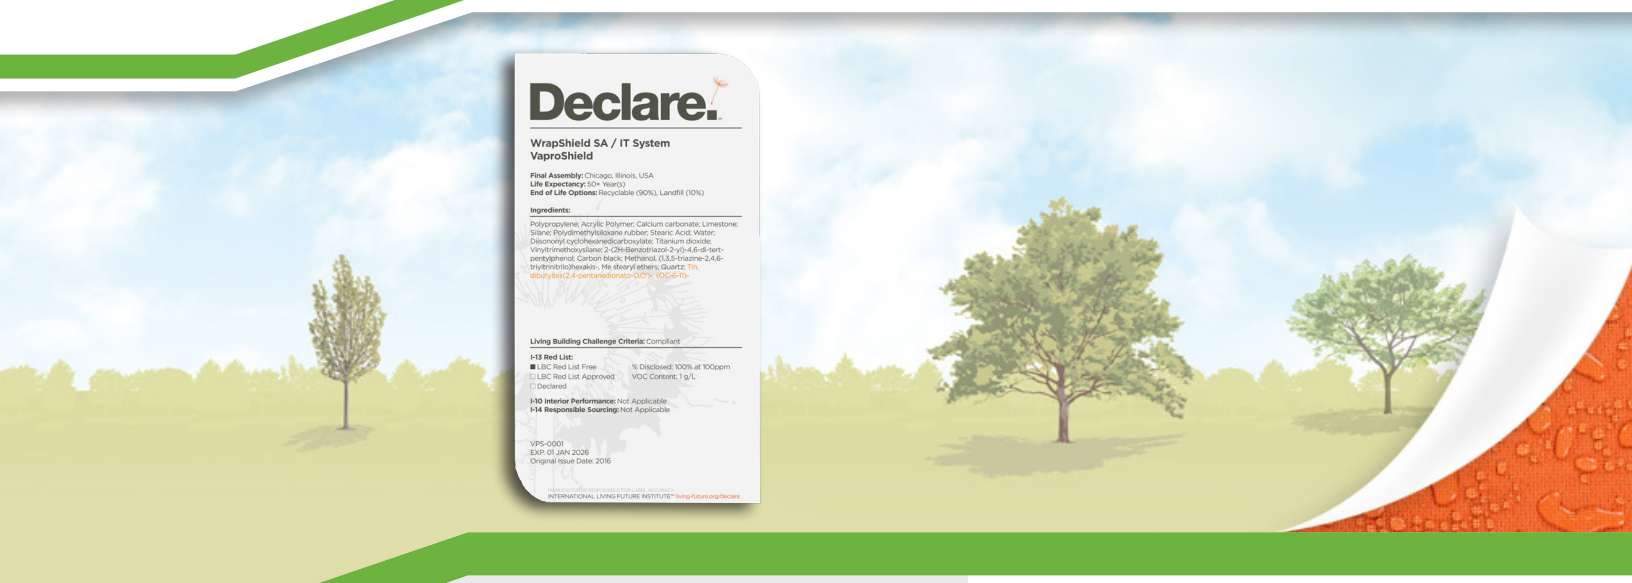
VaproShield Awarded Declare Label

WrapShield SA Self-Adhered System

A self-adhered water-resistive vapor-permeable air barrier sheet membrane system with liquid flashing



WrapShield SA Self-Adhered System is the first water resistive barrier (WRB)/air barrier self-adhered sheet good membrane system to earn a Declare label placing the system at the forefront of the transparency movement.

• To qualify for a Declare label, a building product must either be free of, or declare any harmful Red List chemicals and meet all Appropriate Sourcing Imperatives as determined by the International Living Future Institute.

• WrapShield SA Self-Adhered required no changes to its formulation or material components, because from its inception it was free of harmful ingredients including all Red List Chemicals.

*Visit living-future.org/declare and living-future.org/lbc to learn more about the Declare Label standards and the Living Building Challenge program.

LIVING BUILDING CHALLENGE

VaproShield membranes have been part of buildings ready to take on the LBC pursuit of certification.

Omega Institute
Received the highest level of LBC certification, WallShield WRB was selected.

Brock Environmental Center
First LBC project in Virginia, SlopeShield SA Self-Adhered WRB Roof Underlayment was used.

VAPROSHIELD®
Breathable Membrane Systems for Roofs & Walls
